Breathing Tubes for Discovery Band

Greetings Brass and Woodwind players and parents,

We will be using a new device this year known as a Breathing Tube for the wind players. This device has a handle that can close part of the tube creating resistance for the airstream. This is like “weightlifting” for the lungs. If you have an asthmatic condition please let the staff know so we can adjust the exercises for you. The tube is actually a Compact Ball Valve, which you can find at Lowes or Home Depot in the plumbing department. Here are the specific breathing tubes and measurements for specific instruments:

This is the **1/2” Compact Ball Valve** and is for *all winds instrumentalists* (check the print on the rim carefully for size listing before purchasing - this model costs between \$4-7):

Students need to have these specific tubes by the second week of school. This simple piece of equipment could have a major impact on our year and we look forward to using them. If you have any questions please let me know.

Many thanks,
Mr. Marc Whitlock
